CLEAR CHOICE SHUTTERS, INC INTRODUCES NEW HURRICANE SHUTTER SYSTEM

The “Coastal 20” Hurricane Shutter System

Bonita Springs, Florida – November 14th , 2008 – Clear Choice Shutters, Inc introduces an evolutionary shutter system in response to the need for stronger, longer lasting shutters that will not corrode and blister as most other systems do in the hostile Florida climate. All too often we have seen shutter systems in need of replacement due to the corrosive climate of salt and sea spray on coastal residences.

The “Coastal 20” system is the only system built entirely with USA Mill Structural materials. This is then coated with the KYNAR® paint finish which coats and protects the aluminum and provides an industry first guarantee against blistering or corrosion for 20 years. With the introduction in Q1 2009 of the “ClearView” slat option, homeowners can protect their home with the ability to allow light in, and see out. The system also incorporates an ALL STAINLESS STEEL anchoring system ensuring the shutter is attached securely and permanently to the building structure, unlike regular metal anchors that can rapidly corrode. No matter how strong a shutter system is manufactured, unless it is installed securely and permanently with Stainless Steel anchors, it is likely to fail. Combining the SIMU motor system, recognized as the strongest and longest lasting motor available today, it is easy to see how this new shutter system has been designed from the outset to outlast and outperform any other system currently available.

Specifications Highlights:

Spans up to 24' with no Storm Bars required

ClearView Open slats with integrated Lexan

All USA Mill Structural Materials used.

KYNAR 500® Paint System on all Aluminum components.

All Stainless Steel Anchor system

SIMU Motor system with Remote as Standard

Lexan (LEXAN) is a registered trademark for SABIC Innovative Plastics

Kynar 500® PVDF resin-based coatings is precisely the product necessary to provide such protection and preservation to aluminum, galvanized steel, and aluminized steel. No other coating system withstands the rigors of nature and time like those based on Kynar 500® resins. This high-performance fluoropolymer resin, with its extraordinary capability to retain color and gloss, keeps painted metal looking vibrant and appealing.
